About Arizen Technologies

Vision

Arizen Technologies builds secure, scalable, cloud-native and AI-powered software for startups and small-to-medium businesses — engineering that is trustworthy by design, not by afterthought.

Mission

To give growing companies enterprise-grade software development and cybersecurity capability, delivered with the speed and personal attention of a specialist partner rather than a faceless vendor.

What We Stand For

Security-First

Every build treats security as a design constraint, not a checklist item.

Cloud-Native

Scalable, automated, and built for real-world growth from day one.

AI-Augmented

Intelligent features and workflow automation, applied where they create real value.

True Partner

Long-term relationships built on clarity, reliability, and craft — not vendor lock-in.

What We Do

Two disciplines, one team: we build the product and we secure it, so nothing falls through the gap between development and security.

Development

- SaaS Development
- API Engineering
- Cloud Engineering
- AI Solutions
- DevSecOps

Cybersecurity

- Security Assessments
- Application Security
- Cloud Security
- Secure Code Reviews
- Website Security Hardening
- Security Consulting
- Employee Security Awareness Training

Industries We Serve

Primary focus

Startups

Small & Medium Businesses

Current industry expertise

Healthcare

E-commerce

Expanding into

FinTech

Logistics

Manufacturing

Education

Real Estate

Enterprise

Why Arizen

- **One team, two disciplines**
No handoff gap between the people who build your product and the people who secure it.
- **Senior attention, not a bench of juniors**
You work directly with the engineers doing the work.
- **Security built in, not bolted on**
Threat modeling and secure code practices start on day one, not after an incident.
- **Built to scale with you**
Cloud-native architecture from the first commit, so growth doesn't mean a rebuild.

How We Work

A straightforward engagement model designed for founders who need clarity on scope, timeline, and cost — not a lengthy sales process.

01**Discovery Call**

We learn your product, constraints, and goals — no cost, no obligation.

02**Proposal & Scope**

A clear proposal, quotation, and timeline. Contracts (MSA/SOW/NDA) as needed.

03**Build & Secure**

Development and security work in parallel, with regular check-ins and demos.

04**Launch & Support**

Ongoing maintenance, monitoring, and managed services after go-live.

Let's build something secure.

Secure. Scalable. Intelligent.
